In addition to bringing research to station, the Dragon's unpressurized trunk is carrying a new Canadian-built Latching End Effector, or LEE. This new LEE is being launched as a spare to replace the failed unit astronauts removed during a series of spacewalks in the fall of 2017. Each end of the Canadarm2 robotic arm has an identical LEE, and they are used as the "hands" that grapple payloads and visiting cargo spacecrafts. They also enable Canadarm2 to "walk" to different locations on the orbiting outpost, including Canada's Mobile Base, which travels along rails on the space station's main truss.

SpaceX-15, the 15th Commercial Resupply Services mission for NASA, is an unmanned cargo mission to the ISS (International Space Station). It is packed with more than 5,900 pounds of research, crew supplies and hardware. The SpaceX Dragon spacecraft will launch on a Falcon 9 rocket from Space Launch Complex 40 at the Cape Canaveral Air Force Station. About 10 minutes after launch, Dragon reaches its preliminary orbit, at which point it will deploy its solar arrays and begin a carefully choreographed series of thruster firings to reach the International Space Station. It will take 3 days to arrive at Station.

OpenStreetMap interface showing a map of an urban area. The map includes street names such as Garden Street, Orange Street, Main Street, and Washington Avenue. A 'Viewing Site' is circled in red on the map. A black arrow points from the 'Viewing Site' to a callout box in the top right corner. The callout box contains the Playalinda Brewing Co. logo and the address: 305 S Washington Ave, Northbound US1, near Main St. The interface includes a search bar, navigation controls, and a scale bar.
