

SpaceX-17, the 17th Commercial Resupply Services mission provided by SpaceX for NASA, is an unmanned cargo mission to the ISS (International Space Station). It is packed with more than 3,000 pounds of research equipment, crew supplies and hardware. The SpaceX Dragon spacecraft will launch on a Falcon 9 rocket from Space Launch Complex 40 at the Cape Canaveral Air Force Station. About 2-1/2 minutes after launch, the second stage is released pushing the Dragon capsule into a matching orbit with the ISS. The first stage then begins its decent towards the Atlantic Ocean where an autonomous drone ship awaits the rocket with a landing pad for it to land on.

At 9-1/2 minutes into the mission, the second stage releases THE DRAGON CARGO CRAFT to continue on to the ISS. As Dragon reaches its preliminary choreographed series of thruster firings to reach the International Space Station. It will take 2 days to arrive at Station.

SPX-17

Launching on a Falcon 9 Rocket for the National Aeronautics and Space Administration

2019-04-26, 5:55 amEDT

308 Pine St
Titusville FL 32796
Open Mon-Sat, 10am to 4pm

In addition to bringing research to station, the Dragon's unsurized trunk is carrying the Orbiting Carbon Observatory 3 (OCO-3) and the Space Test Program, Houston 6 (STP-H6). The OCO-3 will be attached to the Japanese Experiment Module. The STP-H6 platform holds a number of experiments developed at various schools and universities allowing students to learn the demanding art of creating hardware for use in space.
