

An Atlas V rocket will launch the Boeing CST-100 Starliner space-craft on an unpowered Orbital Flight Test (OFT) to the International Space Station. The capsule will dock with the space station, then return to Earth to land in the Western United States after an orbital shutdown cruise ahead of Boeing's manned Crewed Flight Test (CFT). The launch of the Starliner is timed for when the orbital path of the ISS crosses Launch Complex 41.

Boeing's Crew Space Transportation (CST)-100 Starliner space-craft is being developed in collaboration with NASA's Commercial Crew Program. The Starliner was designed to accommodate seven passengers, or a mix of crew and cargo, for missions to low-Earth orbit.

For NASA service missions to the International Space Station, it will carry up to four NASA-sponsored crew members and time-critical scientific research. The Starliner has an innovative, weld-less structure and is reusable up to 10 times with a six-month turnaround time. It also features wireless internet and tablet technology for crew interfaces.
