

leading provider of global, near-daily satellite imagery data and insights. They are driven by a mission to image all of Earth's landmass every day, and make global change visible, accessible and actionable. The first stage of the Falcon 9 booster is expected to land on a barge in the Atlantic Ocean off Charleston SC. The landing will be too far to see from launch viewing areas, though an upper atmosphere re-entry burn might be visible about 7 minutes after launch.

Space Exploration Technologies Corp, known around the world as SpaceX, is launching its next 'batch' of Internet Broadband satellites, as well as carrying three satellites as 'rideshare customers'. Today's launch will put the eleventh 'batch' of Starlink satellites into orbit. The first launch of 60 satellites was considered Starlink-0, so this flight is designated Starlink-10. Many of these satellites will include some inter-satellite communications among 'birds' in the constellation. Inter-satellite laser communication links will allow faster internet connections without multiple 'hops' via ground stations. SpaceX has articulated the explicit goal of providing broadband internet connectivity to underserved areas of the Earth, as well as to provide competitively-priced, low latency service to urban areas. Moreover, SpaceX has indicated that the positive cash flow from selling satellite internet services would be necessary to fund SpaceX plans for Mars. Rideshare customer Planet is launching three of their high-resolution satellites, SkySats 19-21, on this mission. Planet is the
